

Project: 12 Arthur Street, London

Product: Bespoke

Services:  
Bespoke lighting manufacture  
Specialist lighting installation

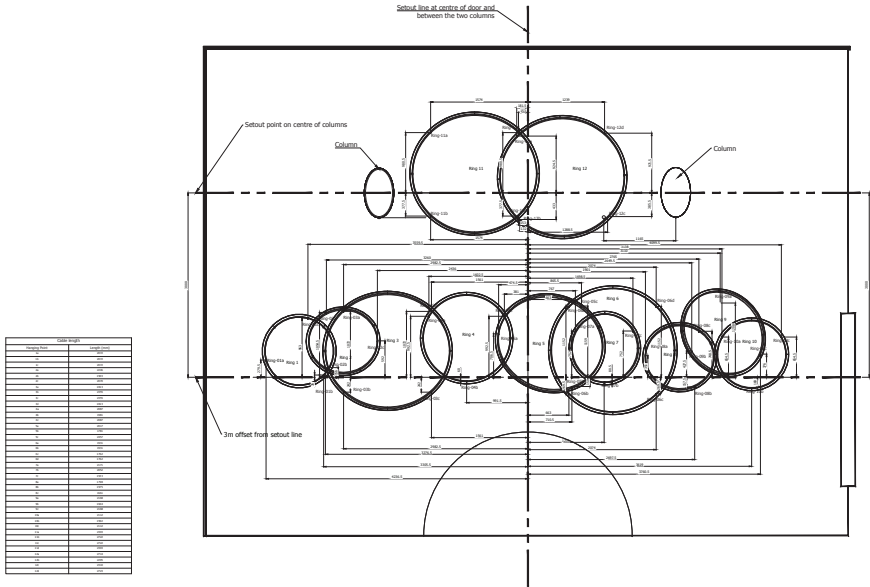

Architect: Morrow & Lorraine  
Lighting designer: Studio Fractal

Date completed: October 2017

Project Description

- The Light Lab manufactured and installed a striking bespoke atrium feature at the commercial office development at Arthur Street, London - realising initial design concept by Morrow & Lorraine Architects & lighting designers Studio Fractal.
- We fabricated custom extruded and rolled aluminium extrusion into complete rings of 4 different sizes with an anodised finished to match the brass trims used throughout the atrium.
- Our team then installed the rings, suspended from the ceiling in specific individual positions and orientations to create an intricate interlocking pattern and an eye catching atrium feature for the office reception area.
- The lift lobbies adjacent to the atrium also use the same profile and finish for the linear wall lights providing a halo of light and ensuring design consistency. In addition our LED trimless panels are installed above the entrance to each liftcar.
